

Decal Application

Decal Application Instructions

Transfer tape has been supplied with your decal.

Remove the transfer tape liner and place adhesive side down over your images

Use a craft stick or scraper to rub the tape onto the vinyl to ensure adhesion, start in the centre and move out toward the edges to prevent bubbles.

Application

Peel away the vinyl liner at a 45-degree angle, your decal should start to separate onto the transfer tape. If the vinyl does not separate simply rub the transfer tape onto the vinyl and peel away again.

Make sure your project surface is clean & dry.

Carefully place the transfer tape with vinyl images onto your surface as you would like them to appear

Rub the transfer tape onto the surface, starting at the centre and moving out towards the edges

Slowly peel the transfer tape away from the vinyl. If the vinyl sticks to the transfer tape, as above, rub onto the surface again. Continue to peel away the transfer tape until your vinyl image is in place.

Handwash only
